Selection Criteria

For the 61st Nobel Laureate Meeting – Physiology or Medicine

For the Meeting of Nobel Laureates in Lindau to be held from June 26 to July 1, 2011, Nobel Laureates in Physiology or Medicine will be invited. The audience for their lectures, for the round table discussions on interdisciplinary topics and for the special discussion sessions will be about 600 students and young scientists.

These young participants will be recruited worldwide among (1) undergraduate students, (2) master and doctoral students and (3) young postdoctoral scientists in the field of Physiology or Medicine, including related disciplines. The following standards and criteria serve for their selection among the applications:

All nominated participants shall

- show a genuine interest in science and research,
- show a strong commitment to their principal field of studies and to the interdisciplinary work,
- receive strong support of their application by their academic advisor and/or by internationally renowned scientists, through a detailed letter of recommendation,
- be fluent in English, capable of active participation in discussions,
- belong to the top 5 percent of their class,
- not already have a permanent position. Researchers with permanent positions – in particular on the professor level – will in general not be admitted to the meeting
- not have participated in previous Lindau Meetings,
- deliver fully completed applications on the website on or before the deadline of December 15th 2010 [Responsibility of the nominated individuals: incomplete applications will not be considered]

It is intended to have a good balance between these three groups:

(1) Undergraduate students

- exhibit a solid general knowledge in the natural sciences and biology/medicine,
- have done some practical work and/or have laboratory experience.

(2) Master and doctoral students

- show excellent academic accomplishments,
- have produced some very good research work.

(3) Postdoctoral scientists

- have up to 5 years of postdoctoral experience (optimum about 2-3 years after doctoral degree),
- have published results of own scientific research in refereed journals, preferentially as first author,
- have presented their work at international scientific meetings, preferentially as lectures.
